### Abstract

The crisis of heavy industry (steel, metal and mechanical industry) has been evinced since the first half of 70's in North Milan (including Communes of Bresso, Cinisello Balsamo, Cologno Monzese and Sesto San Giovanni); to reply to these questions Communal Administrations have set in motion a common effort which aims are accompanying and government of change. Local Agenda 21 of North Milan integrates the processes of integration and development which are already realised in the area with operative character's aspects, giving a hand to do from the case of "Agenda 21 of North Milan" a case of innovative experience, with excellent potentialities of success and efficacy on local level and positive relapses in terms of international visibility.
